

# Skiosk Pay Stations

## Accessible Designs for the Built Environment

### TECHNOLOGY

Exclusive Canadian Technology Partner

**SKIDATA**

### FEATURES:

The skiosk line of interactive and multifunctional digital kiosks combines ease-of-use and intelligent technology into a new class of devices that meet accessibility requirements.

#### TOUCH OPERATION

Large touch screens are designed for accessible operation. The shift-screen with automatic accessible height adjustments combined with optimally positioned control elements is provided to accommodate persons of various heights and levels of mobility.

#### OPERATING HEIGHT CONTROLS

Usability is optimized for customers in a seated or standing position with our automated height-adjustable touch screen. Pay stations support cashless options with numerous payment methods through the use of barcode and RFID-readers.

#### CLEAR SIGNAGE

Device signage is intuitively designed with consistent locations, shapes and colours. Ease of identification is achieved using glare-free signs, characters and symbols that meet accessible height requirements, use of international accessibility symbols and bright levels of illumination where applicable.

### YOUR BENEFITS

- Large touch screens with accessible height displays using scroll or shift screen functions
- Cashless payment options
- Assisted listening systems for AFILS-compatible hearing aids
- Accessible-smart designs: consistent and strong colour, character and symbol contrasts, international symbols, glare-free surfaces, bright illumination levels.

#### COLOUR CONTRAST

Users can easily identify operating controls with substantial contrast used in colour, characters and symbols compared to the device background.

#### ASSISTIVE LISTENING SYSTEMS (ALS)

Special amplifiers enable the use of the audio system in AFILS-compatible hearing aids to provide improved intelligibility and sound quality. International symbols of accessibility for persons who are hard of hearing are included on all devices.

#### SELF-SERVICE INTERACTIVE DEVICES

The modern barcode scanner enables a brand new method of ticket delivery: your customers can conveniently pick up tickets reserved on the internet (using print-at-home or their mobile device) at the skiosk. Reservation codes can be redeemed and the RFID data carrier issues right at the digital kiosk.
