# SKIDATA

Setting trends in the kiosk segment.

Interactive, multifunctional, and specializing in cashless payment, the skiosk Lite is the profitable expansion of your current business model.

## ADVERTISING OPPORTUNITY

The skiosk Lite's 18.5-inch display features a split-screen function, which makes for an excellent advertising space for digital pictures and videos. The large-format display can be sold to business partners as an advertising space and help you generate additional income.

## REMOTE CUSTOMER SERVICE

Remote assistance uses remote device operation and bi-directional intercom and video. This means that from the control centre, you are digitally present in the garage and can remotely carry out operating steps for your customers as needed.

## CASHLESS - EASY, FAST AND SECURE

Payment isn't the only thing that's simplified with this machine. Personnel-intensive tasks associated with handling bills and coins are eliminated, which significantly improves security.

## CONVENIENT SERVICE

Your customers can conveniently pick up tickets they reserved online (using Print@Home or their mobile phone) at the kiosk. And, via links on the display, customers will also find helpful information on rates, nearby destinations, the weather, and more.
